

## EMPATIV

EMOTIV's smallest Brainwear® technology to-date unlocks the complexity of your emotional state, allowing you to send and receive these emotions to your closest loved ones or favorite devices.

## Never Lose Track of Your Loved Ones' Emotions Again

EMOTIV's newest and Smallest Brainwear® technology not only interprets your brain activity to understand and analyze your emotional state, breakthrough technological advancements have allowed for temporary simulation of brain activity so you can *actually feel* what your loved ones are feeling. The Empativ chip is so small that it's virtually unnoticeable and is easy to install - just stick the Empativ chip to the skin on your head or neck behind your ear - that's it!

## Limit Empativ Control to Only Your Most Trusted Connections

Only trusted connections between bluetooth-enabled Empativ devices approved by you will have access to simulate brain activity for a limited period of time. Most interactions last for 30 seconds or less, but the device will automatically revert back to your brain activity after 10 minutes. You will have to approve any request for Empativ control and can delete connections at any time from your Empativ app.

## See and Feel Others' Emotions in Real Time

Every Emotiv emotional chip comes with a corresponding experience on the Emotiv app. Through this convenient mobile application, you are able to set-up your chip for the first time, establish the range of emotions you want to track and share with others, manage your connections to others, and initiate/terminate simulations from chip to chip. Use this app and the simple, sleek, minimal Emotiv chip to start building more empathetic and healthier relationships today!
